StreamOne[®] Ion

Over the past three months, StreamOne[®] Ion has continued to evolve to support the scale, complexity, and mission-critical demands of modern cloud and AI businesses.

Q1 updates delivered targeted optimizations that improve transaction speed, pricing accuracy, and day-to-day usability across high-impact partner workflows. Partners will see up to a 40% improvement in Microsoft cart performance across critical actions, along with backend enhancements that resolve promotion display and pricing inconsistencies.

We also improved Azure lifecycle management responsiveness for partners operating at higher volume or with more complex usage models. These enhancements reinforce our commitment to reliable transactions, operational excellence, and partner trust—ensuring StreamOne[®] Ion continues to scale with your business.

Aggregation & Orchestration

VENDOR INTEGRATION

Expanding a connected ecosystem that accelerates sales, strengthens portfolios, and simplifies end-to-end vendor engagement.

Checkpoint (Purchase and Lifecycle Management)

Checkpoint is being integrated into StreamOne[®] Ion, expanding the security portfolio with a globally recognized industry leader. This integration streamlines purchasing and lifecycle management, improves solution visibility, and reduces sales complexity through bundled offerings and simplified workflows. Partners can move faster from quote to close, accelerate time to market, and deliver comprehensive security solutions that drive growth, strengthen customer retention, and support evolving cybersecurity needs.

SYSTEM INTEGRATION

Unifying platform and APIs to deliver seamless connectivity.

Microsoft –Unbilled Invoice Reconciliation API Upgrade

Microsoft has enhanced its Partner Center billing experience by introducing a new asynchronous unbilled invoice reconciliation API built on Microsoft Graph. This upgrade significantly improves performance and scalability, reducing reconciliation times from hours to minutes even when processing millions of billing line items. For partners, this means faster access to billing data, improved accuracy, and quicker resolution of billing inquiries—supporting more efficient financial operations and a better overall customer experience.

API Expansion - Product Optimization

StreamOne[®] Ion has expanded its V3 Product Catalog APIs to improve product discovery and commerce performance. Partners can now search more efficiently using Cloud Provider IDs and Manufacturer Part Numbers, while Product IDs are returned as a top-level field for easier reuse across ordering and automation workflows. These enhancements simplify integration, reduce development effort, and support faster, more accurate transactions—all while maintaining backward compatibility. Updates are available in the V3 Swagger portal to help partners quickly adopt and scale with confidence.

Aggregation & Orchestration

OPERATIONAL EFFICIENCY

Automates processes and provisioning to reduce manual workload or effort.

AWS – Billing Calculation Enhancements

StreamOne® Ion has enhanced AWS billing workflows to simplify credit management across complex billing scenarios. Partners can more easily track, manage, and apply credits using an improved Credit Report experience—supporting faster reconciliation, cleaner financial operations, and greater confidence when managing AWS customer accounts at scale.

FRICTIONLESS TRANSACTIONS

Streamlines product buy flow for improved efficiency, speed and accuracy.

Microsoft—"Extended Service Term" Enablement

Effective April 1, 2026, Microsoft introduced Extended Service Term (EST) options for subscriptions with auto-renew disabled, giving partners and customers greater flexibility at renewal. Customers can now choose between Cancel-At-Renewal, where services end at term expiration, or Extended Service Term, which maintains service continuity beyond the original term.

Google Workspace - Marketplace Purchase and Provisioning Enhanced

StreamOne® Ion now supports Google Workspace's latest Marketplace requirements, enabling real-time eligibility validation and accurate, policy-aligned pricing. These enhancements help partners reduce billing issues, improve compliance, and streamline purchases, renewals, and subscription transfers. The result is a smoother buying experience, fewer downstream corrections, and greater confidence.
