TD SYNNEX

StreamOne® *Ion*

We're excited to share latest StreamOne® Ion updates which introduce significant enhancements, driving efficiency, flexibility, and a better user experience.

StreamOne® Ion is rolling out enhancements that help partners work faster, reduce manual effort, and improve billing accuracy across major cloud providers. New automation—like **Microsoft's centralized tenant management** and the **Rules & Recommendations** engine—streamlines setup, compliance, and cross-sell opportunities. Billing updates for **Google Cloud and AWS** ensure cleaner pricing, correct discount handling, and greater transparency. Improved **AWS pass-through pricing** further simplifies transactions, while new **cookie-management** controls strengthen compliance. Together, these updates boost operational efficiency and create a more frictionless, predictable cloud commerce experience for partners.

Aggregation & Orchestration

OPERATIONAL EFFICIENCY Automates processes and provisioning to reduce manual workload or effort.

New! Rules & Recommendations Engine

Create automatic cross-selling and upselling opportunities driving more sales. The new Rules and Recommendations engine in StreamOne® Ion automates product visibility and checkout recommendations, enabling granular catalog control, cross-sell and up-sell strategies, and compliance with regional requirements.

Rules-based
Partners control which products, plans, and features are shown to each customer.

Automated Suggestions
Cross-sell and upsell options based on user behavior and purchase history.

Trigger upsell campaigns

Promote "buy together" bundle offers

Target high-propensity segments
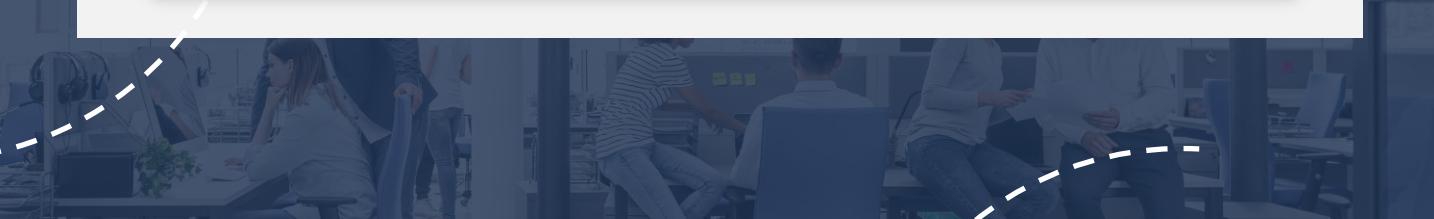

Aggregation & Orchestration

OPERATIONAL EFFICIENCY
Automates processes and provisioning to reduce manual workload or effort.

Microsoft New Tenant Management Experience

The Microsoft New Tenant Management Experience centralizes tenant setup and MCA acceptance within the Cloud Providers module, eliminating checkout dependencies and validating prerequisites upfront.

Google Cloud Platform - Billing calculations & pricing management enhancement

StreamOne® Ion now improves billing accuracy and pricing management for Google Cloud Platform by introducing a new "3rd Party Software" category in the GCP Pricebook. This enhancement ensures correct identification of SKUs without reseller margin and simplifies price adjustments, enabling better transparency, streamlined operations, and improved control over pricing strategies for partners.

AWS - Exclude Discounts for Non-Eligible Services

StreamOne® Ion now ensures greater billing accuracy for AWS by automatically excluding distributor discounts from non-eligible services. This backend-driven enhancement validates SKUs against an authorized list, applies pass-through rules where necessary, and automates APN fee credit handling.

FRICTIONLESS TRANSACTIONS
Streamlines product buy flow for improved efficiency, speed and accuracy.

AWS - Pass Through Pricebook enhancements

We've expanded its V3 Order API to enable access to data from parent accounts at the country level to reseller end customer information. This change provides transactional insights at global, regional, and country levels for sales, operations, and finance teams. The update will support tools such as the Executive Dashboard, PPC Dashboard, and Power BI reporting by offering product-level order data.
