

FOR MANAGED SERVICE PROVIDERS

Endpoint Security

Deliver complete endpoint protection to every customer you manage.

Your customers are under attack. Check Point research reveals a 38% year-over-year increase in cyberattacks, with organizations facing an average of 1,150 every week — and cybercriminals are exploiting AI to devise novel, sophisticated attack vectors with relative ease. For MSPs, a shortage of cybersecurity talent makes delivering strong protection across a growing customer base harder than ever.

Diverse Customer Base

Every customer runs a different environment, making it more challenging than ever to keep each one secure.

Multiple Security Products

Managing a different mix of security tools for every client inflates cost and operational overhead.

Endless Attack Surface

Hybrid work, BYOD and cloud services create more entry points across every customer you protect.

Check Point Endpoint Security lets you deliver 360-degree endpoint protection to every customer from a single, multi-tenant console. It integrates advanced Endpoint Protection (EPP), Endpoint Detection and Response (EDR), and Extended Detection and Response (XDR) into one client — so you can prevent attacks, streamline operations, and reduce the cost of delivering security as a service.

With Endpoint Security, MSPs can:

Protect Every Customer

Real-time prevention across all attack vectors stops ransomware and phishing before they reach your customers. Powered by Check Point's ThreatCloud AI for zero-day protection with more than 60 AI engines.

Manage with One Agent

EPP, EDR & XDR with wide OS support in a single agent and unified management — far less to deploy and maintain across every tenant.

Built for MSPs

Multi-tenant management and pay-as-you-go monthly billing that scale with your customer base, plus API-based integration into your existing management and security stack.

Comprehensive & Consolidated Solution

Ransomware & Malware Protection: Fortify your customers' data against sophisticated ransomware attacks.

Posture Management: Reduce the attack surface with automated vulnerability & patch management.

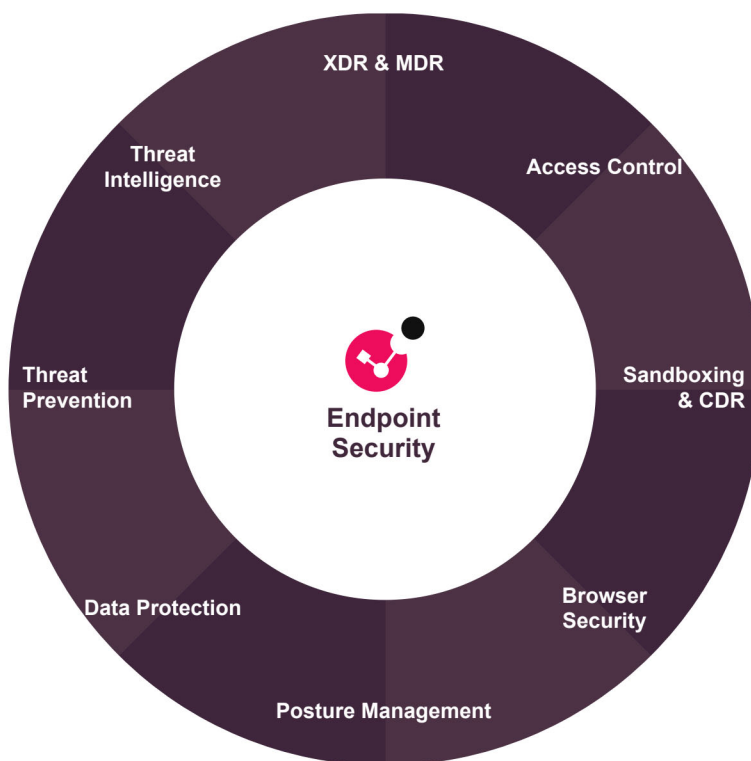

Zero-Phishing & Browser Protection: Blocks the most sophisticated phishing attacks with zero impact on end users.

Data Protection & GenAI Protect: Safeguard sensitive customer data with Full Disk Encryption, advanced DLP, and innovative GenAI security to maintain compliance across every account.

Blocks all entry points 360°

Threat Prevention

Anti-Ransomware & Intel TDT, Anti-Malware, Anti-Exploit, Behavioral Guard, Port Protection

Sandboxing & CDR

Threat Emulation, Threat Extraction

Access Control

Firewall, Application Control, Endpoint Compliance, Remote Access VPN

Posture Management

Vulnerability Management, Patch Management, Inventory Management

Browser Security

Zero-day Phishing, DLP, URL Filtering, Safe Search, Corporate Password Reuse

Data Protection

Full Disk Encryption, Media Encryption

Why MSPs Choose Endpoint Security

Endpoint security is central to the services you deliver. With 70% of cyberattacks starting on the endpoint, protecting every customer at the highest security level is essential to prevent breaches — and to protect your reputation as their security provider.

Check Point Endpoint Security is a complete solution built to protect your customers from today's complex threat landscape. It prevents the most imminent threats — ransomware, phishing, and drive-by malware — while quickly minimizing breach impact with autonomous detection and response.

And it's built for your business. A single multi-tenant console, pay-as-you-go monthly billing, and fast customer onboarding let you grow recurring revenue and deliver more security services — all in a solution that's easy to use, manage, and buy.
