

The Check Point MSP Platform

A full portfolio of prevention-first security services under one console. Manage every customer from one place, and turn every service into recurring revenue.

INSIDE THE PLATFORM

■ One view for every customer

Every account and the services it uses on one screen, with single sign-on into any customer dashboard.

■ Onboard in one-click

Add a customer, or bulk-import your whole list from a spreadsheet, on the trial services you choose.

■ From trial to paid, your way

Trials convert to the package you pre-selected, and plans or add-ons change in a click.

■ Templates across tenants

Build a configuration once and apply it to many customers at once.

■ Usage you can prove

Monthly and daily consumption reports per service, exportable across every customer.

■ Your logo, your platform

Add your branding once and it carries across your MSP view and every customer portal.

The Offerings

Email Security

Stops phishing, business email compromise, and malicious attachments before they reach the inbox in Microsoft 365 and Google Workspace. A high-margin add-on for every mailbox you already manage.

Workforce AI

Prevents data leakage into public AI tools and blocks malicious AI-driven activity. Shows you shadow-AI usage in every account which is a risk most MSPs can't yet address.

SASE

Secure internet, private-app, and SaaS access from the cloud, replacing legacy VPN and branch firewalls. One policy per customer, and networking plus security on one invoice.

Mobile

Protects managed iOS and Android devices from malicious apps, network attacks, and OS exploits, with zero end-user friction. Bundles into any managed mobility package.

Endpoint Security

Prevents ransomware, malware, and zero-day attacks on every managed workstation and server before they execute. Automatic remediation keeps endpoints clean without adding analyst hours.

MDR

24/7 monitoring, threat hunting, and containment without hiring a night shift. Check Point analysts hand you clear actions so you can resell a full SOC as your own.

WAF

Protects web apps and APIs from OWASP Top 10 attacks, bots, and account takeover with AI that learns each app's behavior. Fewer false positives, fewer support tickets.

Network

Prevents intrusions, lateral movement, and command-and-control traffic across on-prem and hybrid networks. Manage every firewall and tenant from one place.

Browser Security

Turns any browser into a secure workspace, blocking phishing sites, malicious downloads, and data leakage to unsanctioned apps. Covers BYOD devices with no agent.
