

REAL-TIME ALERTS FOR THE MODERN ENTERPRISE

Dataminr Pulse uses AI to give you the earliest indicators of business-critical information about risks to your people, your brand, and physical and virtual assets – so you can respond with speed and confidence. A personalized and context-rich experience tailored to each of these risk areas ensures the alerts you receive are relevant and actionable for your business. Integrations with major critical event management, geo-spatial, employee safety, and risk management platforms ensure your risk workflow can harness real-time information. Administrative capabilities for user and location management support enterprise-scale deployments and simplify self-service.

What You Can Do with Dataminr Pulse

AI THAT UNDERSTANDS CORPORATE RISK IN THE MODERN ENTERPRISE

Dataminr's AI platform ingests and processes billions of public, multi-modal data units (text, images, video, sound) every day from **500,000+** public data sources globally – to detect, in real time, high-impact events and emerging risks that build situational awareness and enable rapid, coordinated responses.

CLOSE THE GAP BETWEEN EVENTS AND WHEN YOU DISCOVER THEM

Dataminr Pulse detects, distills and alerts from public social media, blogs, information sensors and the dark web in real time – to provide you the first glimpse of potential threats and opportunities.

ANTICIPATE, MOBILIZE AND RESPOND WITH CONFIDENCE AND SPEED

Real-time alerts and alert updates in the hands of professionals across your company provide clarity as an event unfolds, yielding valuable context as you manage your risk workflow - so that you can be more nimble and proactive in your response.

COVER THE GLOBE OR YOUR BACKYARD

Your operations and customers are everywhere around the world. With Dataminr, you can be as well. The platform detects signals in 100+ languages so that no matter where a relevant event happens, you will learn about it first.

ENTERPRISE READY AT ANY SCALE

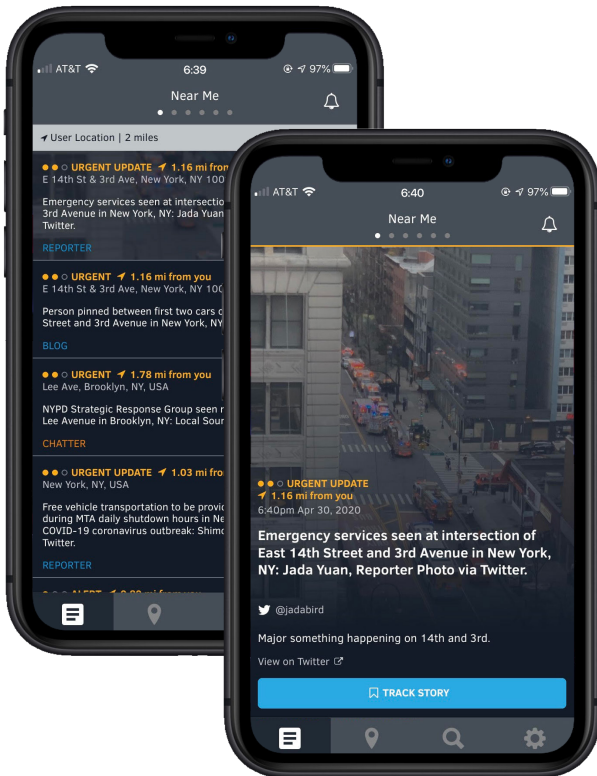

Easily deploy across teams, functional areas or your entire organization with a real-time risk alerting platform that scales to whatever number of assets you need to protect. Reliable, scalable, and secure (SOC2 Type I and NIST 800-171 compliant).

A Real-time Alerting Solution Like No Other

REAL-TIME ALERTS — ENSURING YOU RECEIVE CRITICAL INFORMATION FASTER

Real-time alerts ensure you know first and maintain situational awareness about threats to your people, your brand, and physical and cyber assets. Defined content defaults for these risk types, first party content integration, visual alerting experiences, and unique features in each delivery endpoint increase alert relevance and actionability.

ENTERPRISE MANAGEMENT — MAKING IT EASY TO MANAGE DATAMINR FOR YOUR ORGANIZATION

The Hub for Dataminr, our user and location management capability provides a simple, efficient way to deploy, scale and manage Dataminr securely across a large organization. Features within the Hub including smart radius, location groups, and client asset metadata in alerts ensure users receive relevant alerts for the right locations with actionable, contextualized data - at the right time.

WORKFLOW INTEGRATION — SEAMLESSLY INTEGRATING INTO YOUR EXISTING WORKFLOW

Dataminr fits into your operational workflows, whether that's consuming alerts through our desktop or mobile applications, on the wall in your security operations center, or receiving them via email instantaneously or as a digest. Integrations with major CEM, geo-spatial, employee safety, and risk management platforms - including Everbridge ERSI, Vismo and Control Risks - ensure your workflows harness real-time information.

CUSTOMER SUPPORT — ENSURING YOUR SUCCESS

Your account manager, dedicated customer success team, and technical support team work in partnership with you to support your onboarding, ongoing training for users and admins, and sharing of best practices - all to ensure your success.
