

# Trend Vision One™ - Endpoint Security

## Optimized prevention, detection, and response for endpoints, servers, and cloud workloads

Trend Vision One™ - Endpoint Security is the leading endpoint security solution that is purpose-built for endpoints, servers, and cloud workloads, integrating advanced threat protection, EDR/XDR, and threat intelligence. This solution will help you streamline IT/security operations, reduce complexity, and achieve optimal security outcomes across your on-premises, cloud, multi-cloud, and hybrid environments.

As part of Trend Vision One™, a modern, cloud-native cybersecurity platform with the broadest set of native solutions, complimented with third-party integration, you can connect endpoint and workload security with other protection products, threat intel, SIEM, orchestration, build pipeline, attack surface management, and more. Trend Vision One supports diverse hybrid IT environments, helps in automating and orchestrating workflows, and delivers expert cybersecurity services, so you can stop adversaries faster and take control of your cyber risks.

### Integrated EDR

With Trend Vision One, your customers get the XDR advantage with integrated EDR capabilities.

- Receive prioritized, actionable alerts and comprehensive incident views.
- Investigate root cause and execution profile across Linux and Microsoft Windows system attacks to uncover their scope and initiate direct response.
- Hunt for threats via multiple methods—from powerful queries to simple text search— to proactively pinpoint tactics or techniques and validate suspicious activity in their environment.
- Continuously search for newly discovered IoCs via Trend Micro automated intelligence or custom intelligence sweeping.

### Comprehensive threat protection from layered prevention to detection and response

Get timely protection against an ever-growing variety of threats by leveraging automated and advanced security controls, and the latest industry-leading threat intelligence.

With a full range of layered prevention, detection and response capabilities—such as modern anti-malware and ransomware protection, device control, host-based intrusion prevention, application control, machine learning/AI, and more—you can defend your endpoints, virtual desktops, servers and cloud workloads in real time

### Protection Points

- Physical endpoints
- Microsoft® Windows® PCs and servers
- Mac computers
- Point of sale (POS) and ATM endpoints
- Server
- Cloud workload
- Virtual machines

### Threat detection capabilities

- High-fidelity machine learning (pre-execution and runtime)
- Behavioral analysis (against scripts, injection, ransomware, memory, and browser attacks)
- In-memory analysis for identification of fileless malware
- Variant protection
- Census check
- Web reputation
- Exploit prevention (host firewall, exploit protection)
- Command and control (C&C) blocking
- Data loss prevention (DLP)
- Device and application control
- Ransomware rollback
- Sandbox and breach detection integration
- Extended detection and response (XDR)

## Purpose-built security for your server and cloud workload

### Modern, cloud-native security for the hybrid cloud

- Workloads, by default, are vulnerable from the moment they are instantiated. Trend provides built-in workload discovery capabilities, integrating with AWS, Microsoft Azure, Google Cloud Platform, VMware, and Microsoft Active Directory to provide protections from the moment they are created.
- Eliminate the cost of deploying multiple point solutions and achieve consistent security across physical, virtualized, cloud, container, and user endpoint environments with a single management console.
- Monitor for changes and attacks on Docker and Kubernetes platforms with integrity monitoring and log inspection capabilities.
- Protect runtime containers through container vulnerability shielding (via IPS), real-time malware protection, and east-west container traffic inspection.

### Intrusion and vulnerability prevention for endpoints, servers, and their applications:

The Intrusion Prevention module protects your environment from known and zero-day vulnerability attacks as well as against SQL injections attacks, cross-site scripting attacks, and other web application vulnerabilities.

Our vulnerability protection and intrusion prevention allow us to provide virtual patches to shield from known vulnerabilities until a patch is available from the vendor. This is backed by our world-leading bug bounty, the Zero-Day Initiative.

### File integrity monitoring

The integrity monitoring module scans for unexpected changes to registry values, registry keys, services, processes, installed software, ports, and files. Using a baseline secure state as a reference, the integrity monitoring module performs scans on the above and logs an event (and an optional alert) if it detects any unexpected changes.

### Log inspection

The log inspection protection module helps you identify important events that might be buried in your operating system and application logs.

The log inspection module allows you to:

- Detect suspicious behavior
- Collect events across heterogeneous environments containing different operating systems and diverse applications
- View events such as error and informational events (disk full, service start, service shutdown, etc.)
- Create and maintain audit trails of administrator activity (administrator login or logout, account lockout, policy change, etc.)

The log inspection feature in Endpoint Security enables real-time analysis of third-party log files. The log inspection rules and decoders provide a framework to parse, analyze, rank and correlate events across a wide variety of systems.

### Proven Leadership

- Trend is a leader in Gartner Magic Quadrant for EPP since 2002. 19 times in a row
- Ranked #1 for Cloud Workload Security Market Share for the 5th consecutive year (2022)
- A leader in the Forrester New Wave™: Extended Detection and Response, Q4 2021
- MITRE Engenuity ATT&CK (2022) - #1 Performer in Linux protection, with 100% of attacks against the Linux host detected and prevented.

### Protecting your Linux platform

Trend Micro's platform provides support for extensive Linux builds and hundreds of Linux kernels, Solaris™, AIX®, and HP-UX®.

### Achieve cost-effective compliance

Address major compliance requirements for the GDPR, HIPAA, NIST, and more, with one integrated and cost-effective solution.
