- 
- 1 All features of this system require an active Internet connection and the use of a supported browser.
  - 2 Part of the ink from the first cartridges/packs is used for initializing the printer. Ink usage will vary considerably based on images printed, print settings, paper type, frequency of use, temperature and humidity. Variance may be more pronounced when printing infrequently or predominantly with one ink color. Ink is used for printing and printer maintenance, and all colors must be available for printing. For print quality, a variable amount of ink remains after the “replace ink” indicator comes on.
  - 3 Ratio determined by weight of 700 mL ink cartridge plastic components vs. weight of 800 mL ink pack plastic components for UltraChrome GS3 Inks.
  - 4 Percent coverage of PMS Formula Guide Solid Coated 2022 Edition Full (excluding Pastels, Neon and Metallic colors) based on Epson internal testing. Coverage will vary when printed under other conditions.
  - 5 Print speeds are based on the print engine speed only. Total throughput time for any print depends on various factors including workstation configuration, file size, print resolution, ink coverage and networking. Actual print speeds will vary.
  - 6 Vs. previous Epson direct-to-garment printers.
  - 7 Service request must be received and processed by 1 p.m. Pacific Time, Monday through Friday, excluding holidays.
-
