AR Instructor

AR guided work instructions solution with integrated digital twins and remote expert collaboration.

Solution Description

AR Instructor is a scalable, cross-OS SaaS solution, leveraging augmented reality, providing guided instruction using previously prepared step-by-step AR directions. The solution employs a no-code authoring approach, synchronized between PC and headset, to create custom workflows with AR prompts. Each step of a guided workflow can be illustrated with AR overlays, video, documents, images, annotations, and 3D models superimposed on objects in the user's field of view. AR Instructor offers integrated remote expert collaboration with 'see-what-I-see' video and mark-ups for additional assistance or work validation.

Common Pain Points Addressed

Industries are seeking to counter productivity issues brought on by travel restrictions, changing technology and a shortage of skilled frontline workers. AR Instructor solution solves these problems.

Rapidly train and upskill workers with improved comprehension and retention

Increase productivity while dramatically reducing operational and travel costs

Improve safety and reduce costly errors

Increase competitive differentiation

Value Proposition

Accelerate digital transformation with AR guided workflows and real time remote expert collaboration to rapidly train your workforce, cut operational costs and improve productivity.

Industries

AR Instructor solution brings value to a variety of industries including:

Manufacturing & Industry 4.0

Telecoms & Data Centers

Field Service & Maintenance

Healthcare

Government & Military

Target Buyer

Key decision makers in the area of digital transformation including:

Program Managers

Operations Managers

Field Service Managers

Training & Development Managers
