

Transforming the Public Sector with TD SYNEX and NetApp

Leverage data to drive digital transformation and innovation in government and education.

In the public sector, digital transformation opens up new possibilities for innovation, increased efficiency, better experiences for citizens and constituents, and improved quality and availability of services. Yet to realize the promise of technology, government agencies and educational institutions must not only modernize IT infrastructure, they must also redesign existing processes and systems and, most importantly, find a way to leverage their most important strategic asset: data.

Effectively using data will enable public sector organizations to:

- Improve services for constituents
- Rapidly achieve policy goals
- Collaborate more efficiently
- Be more responsive and agile

However, data is spread across a hybrid ecosystem of data centers, private, and public clouds. In this complex environment, effectively managing data requires a solution that provides organizations with a unified way to control, integrate, and orchestrate their data, no matter where it is located.

To achieve these goals, it is critical to partner with distributors and IT solution providers who can help public sector organizations bypass the complexity of hybrid IT and leverage data to its fullest extent.

TD SYNEX and NetApp can help. Together, we can deliver a complete set of strategies, tools, and technologies that unlock data-driven transformation and innovation for public sector customers.

Building and Managing a Data Fabric with NetApp

NetApp delivers platforms, applications, and services designed to help customers create their own unique data fabric—a combination of technology and strategy that enables them to:

- Understand their data, applications, systems, and services
- Integrate and manage disparate services
- Automate the operation of their data fabric
- Monitor, react to, and optimize the fabric over time
- Protect data through backup and recovery
- Secure data to maintain compliance and integrity

Building a data fabric with NetApp enables IT leaders in government and education to:

- Shorten the deployment time for new services
- Accelerate the adoption of the cloud
- Enhance organizational agility
- Reduce lifecycle management costs
- Lower IT costs
- Decrease data storage costs

With a data fabric, public sector entities can increase cross-functional collaboration, reduce technical lock-in, manage costs, and enhance security, while achieving the speed, agility, and availability required for next-generation digital initiatives.

Take the Next Step with TD SYNEX and NetApp

TD SYNEX is a leading technology distributor and solutions aggregator for the IT ecosystem, providing channel partners with the reach, expertise, and resources to meet the evolving needs of the public sector.

We have **22,000 of the industry's best and brightest, relationships** with the world's leading technology vendors, a wide range of partner enablement programs, and an unwavering commitment to our partners' success.

With our support, you will be equipped to deploy NetApp's data management solutions, drive digital transformation, and unlock new opportunities for innovation in the public sector.
