

Data Storage and Cybersecurity Protection Solutions for Public Sector Infrastructure

Build digital resiliency with TD SYNnex and NetApp

Public sector organizations are increasingly reliant on data to deliver high-quality services and experiences to their customers and constituents.

Although the proliferation of data opens the potential for new services and solutions, it also adds new vulnerabilities and risks. Cyber threats are growing in sophistication, attack surfaces are expanding, and public sector services are increasingly dependent upon IT. Disruptions to data, as a result, can directly and detrimentally impact public sector services.

To mitigate against such risks, it is critical to find a data storage and cybersecurity protection solution that can:

- Safeguard public data
- Maintain public trust
- Mitigate damage
- Improve the user experience
- Increase operational efficiency
- Ensure IT and organizational continuity

To achieve these aims, public sector IT infrastructures should implement strategies and technologies that focus on building digital resiliency—the ability to quickly respond to and recover from disruptive events.

TD SYNnex, an industry-leading IT distributor, and NetApp, a world-class provider of data management solutions, can help you design and implement a data storage and cybersecurity solution that will help you build that resilience by preparing for disruptions before they occur.

NetApp for Organizational Continuity and Resiliency

NetApp provides a complete suite of integrated IT solutions designed to help you stay agile, protected, and optimized:

Foster an Agile Workforce

NetApp's virtual desktop infrastructure (VDI) and end-user computing (EUC) solutions enable workers to stay productive, connected, and flexible, no matter where they are working from. Cloud storage solutions for virtual desktops and converged infrastructure VDI solutions with FlexPod® provide employees with the ability to collaborate efficiently and securely, even when working fully remotely.

Proactively Protect and Optimize

A range of NetApp tools grant visibility into your hybrid infrastructure, empowering you with the insights to foresee and protect against threats, while optimizing performance. Tools such as NetApp® Cloud Insights offers visibility into your multicloud infrastructure, NetApp® Active IQ® leverages AI to provide insights into the health of your NetApp systems, and NetApp® Cloud Manager helps you protect data with hybrid multicloud management.

Ensure Data Availability Across Clouds

Rationalize your data and application infrastructure, move data between on-premises storage and cloud, and help ensure data availability across multiple clouds with solutions such as NetApp® Cloud Volumes ONTAP, NetApp Cloud Volumes Edge Cache, and NetApp Cloud Sync.

Take the Next Step with TD SYNnex and NetApp

Make the smart choice. Mitigate the risk of future disruptions with a data storage and cybersecurity strategy from TD SYNnex and NetApp.

Connect with us today to find out how we can help you maintain organizational continuity, build digital resiliency, and ensure that your customers and constituents never lose access to your services.
