

## Partner With NVIDIA and TD SYNnex

### Why NVIDIA and TD SYNnex?

TD SYNnex and NVIDIA have a robust team that understands true business growth requires access to meaningful, tangible business infrastructure, tools and resources.

We have invested heavily in providing our partners with high-impact business services, designed from the ground up to help you and your customers grow with NVIDIA.

### Go Beyond the Sale With TD SYNnex Services for NVIDIA Products and Solutions

#### ServiceSolv®

##### ServiceSolv

Providing end-to-end technology services. In today's fast-paced technology services environment, creating ready-to-use technology involves many touch points. Together with customers, TD SYNnex ServiceSolv can provide users with solutions that are ready to go, cost-effective and use technology engineered for the future. Support and supplement your current service offerings, skill sets and geographic reach with TD SYNnex ServiceSolv's value-added, white-labeled services.

##### Financial Services

Need help financing products and solutions? TD SYNnex Financial Services can help grow your business. From traditional credit resources to subscription-based financing, there are several ways TD SYNnex Financial Services can empower your business.

##### Customer Care

TD SYNnex Customer Care's after-sale support team recognizes the importance of providing timely, responsive services to Return Merchandise Authorizations (RMAs) and RMA discrepancies, as well as order inquiries, including outbound shipments and claim processing. We continuously strive to provide world-class customer support and address all our customer requests as opportunities to improve and raise the quality of our services. We understand that repeat business depends on your satisfaction.

##### Advanced Solutions

The way we use data is changing, and with advanced solutions, we can provide opportunities to accelerate your business. Business models are evolving at a rapid pace with advancements in data analytics, AI, 5G and IoT platform technologies. As a solutions aggregator, TD SYNnex provides the expertise, aggregation and ecosystem enablement to simplify data-driven digital transformation, AI and IoT opportunities. Our program's resources and offerings are supported across the key pillars of the digital transformation journey: foundation, modernization, insight-driven and data-driven.

TD SYNnex is here to help you win by selling NVIDIA. From financial to distribution services, to sales support and technical enablement, TD SYNnex is committed to your success. As a TD SYNnex customer, you'll have access to one of the industry's most robust product line cards and a portfolio of services designed to build and grow your business.

## Verticals

No matter what space you and your customers do business in, TD SYNEX can help you grow your NVIDIA business in the following areas:

- Smart Cities and Spaces
- Healthcare
- Manufacturing
- Public Sector
- Education/Higher Ed

## About NVIDIA Solutions at TD SYNEX

Together, NVIDIA and TD SYNEX bring to market a variety of hardware and software solutions, including:

**NVIDIA AI Enterprise** is an end-to-end, cloud-native suite of AI and data analytics software that's optimized to enable any organization to use AI regardless of their current knowledge. It's certified to deploy anywhere — from the enterprise data center to the public cloud — and includes global enterprise support to keep AI projects on track.

**NVIDIA EGX™ Enterprise Platform**, offers end-to-end performance, management and software-defined infrastructure. This is an era of accelerated computing — where data-intensive, graphics-rich enterprise applications abound in data centers, in the cloud and at the edge.

**NVIDIA LaunchPad** gives you the opportunity to explore several free hands-on labs designed for the IT professional to evaluate the benefits of a unified architecture to accelerate both traditional and modern workloads, from AI and data science to high-performance computing (HPC) and virtual desktop infrastructure (VDI). With labs for hybrid-cloud or virtualized data centers on NVIDIA-hosted infrastructure and provided data sets, IT practitioners can immediately access accelerated workflows and ask NVIDIA experts questions about their specific infrastructure.

**NVIDIA Metropolis** is a combination of powerful developer tools to build, deploy and scale AI-enabled video analytics faster and improve operational efficiency and safety across all industries with automated solutions.

**NVIDIA DGX™** systems deliver the world's leading solutions for enterprise AI infrastructure at scale.

**NVIDIA Omniverse Enterprise** is a scalable, end-to-end platform enabling enterprises to build and operate metaverse applications. Based on Universal Scene Description (USD), Omniverse Enterprise allows teams to connect and customize complex 3D pipelines and operate large scale, physically accurate virtual worlds.

**NVIDIA Networking** gives enterprises the infrastructure that supports develop-to-deploy implementations across all modern workloads and storage requirements. It is time to enable a new era of accelerated computing to maximize AI investments with network infrastructure.
