

Carbonite™ Migrate

Making data and workload migrations simple

Migrate quickly and easily migrates physical, virtual and cloud workloads over any distance with minimal risk and near-zero downtime. The streamlined process automates and consolidates numerous steps, which are otherwise manual and prone to human error, into just a few simple tasks, reducing the amount of work you need to do to reach your migration goals.

Challenges with data and workload migrations

Time-consuming, risky and resource-intensive

The potential for downtime and data loss prevents many organizations from undertaking data migrations. Moving data and workloads can be painful, but it's often unavoidable. Migrations are often necessary due to mergers or relocations, hardware, software and application upgrades and moves to the cloud.

Organizations often avoid making these necessary changes due to

- Time and money investment in IT resources
- Complexity of the project
- Associated downtime
- Risk of data loss or corruption
- Application performance issues

Seamlessly migrate your data and workloads

Migrate from anywhere to anywhere: physical, virtual or cloud

The simplicity and repeatability of Migrate enables IT to switch platforms – including to, from and between public clouds– without impacting system availability. It also frees IT from platform lock-in and allows you to be more agile and flexible with IT investments.

Migrate includes

- Automated and orchestrated workflows
- Migration between any combination of physical, virtual and cloud-based platforms to or from any geographic location
- Scalable, continuous replication, with minimal performance or bandwidth impact to prevent downtime
- Easy, non-disruptive testing
- Data security with AES 256-bit encryption
- Scalable solution, from a single server to thousands of servers in multiple datacenters

Benefits

Migrate automates data migration across physical, virtual and cloud platforms, storage types and operating systems with minimal risk.

- Structured, repeatable migration with near-zero downtime
- Highly automated process that eliminates common risks and streamlines migrations
- Increase cost-efficiency by spending less on data storage
- Freedom from lock-in to a specific cloud, hypervisor or hardware

“Carbonite® Migrate is very fast and reliable. Our migration process is expedited and [...] downtime for our customer is practically nonexistent.”

How Migrate removes the risk of data migrations

Centralized administration

Migrate orchestrates your migrations, regardless of source or target, from the initial discovery of your systems to provisioning target VMs and ultimately cutting over.

Our solution uses real-time, byte-level replication to create a replica of the data, applications, database or complete server being migrated. The replica is kept in sync, mirroring changes such as permissions, attributes, file names, deletions and encryption settings.

Streamed replication from anywhere to anywhere

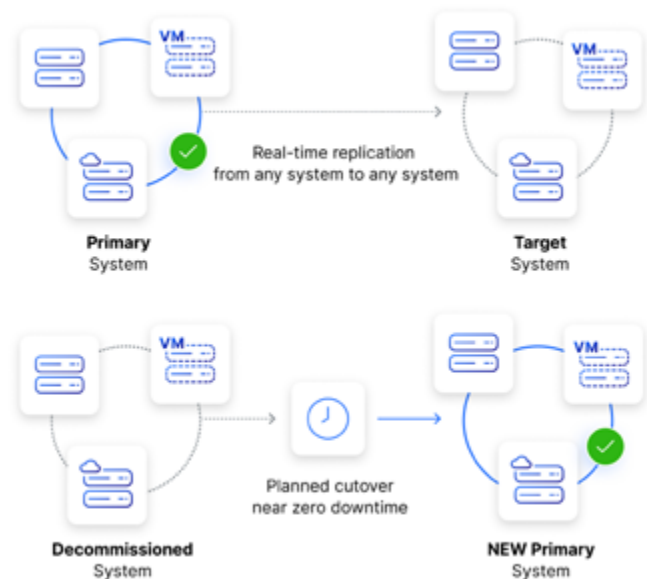

Migrate replicates the source system to the target, using AES 256-bit encryption to ensure security. Our replication maximizes bandwidth efficiency, sending small chunks of data, incorporating multiple levels of compression, and enabling bandwidth throttling. End users can continue working on the source system until the final cutover.

The target server can be validated, and cutovers can be tested anytime without disrupting production systems and business operations.

Cutover to your new system in minutes

Cutover automation is available and cutover downtime is limited to seconds or minutes. If reverting to the original system becomes necessary, the execution is straightforward. The process is repeatable and predictable whether managed through the unified console, automated through scripting or integrated with third-party tools.
