

# Making First Responders More Effective in the Field

Technology for first responders is designed to make each responder more effective at what they do. Police, Fire, and EMS are all reliant on information relayed from citizens. A citizen calls 911 and give information to a 911 call taker. The call taker puts that information over to a dispatcher. Ultimately, it goes from a dispatcher to a first responder who must get to the scene. Time is critical in many situations in the field. Responders can only do as much as possible with the tools they are given. Budgets are often limited, and agencies must work within their means.

We strive to provide top quality solutions that will save time and money, helping to keep first responders in the field, close to their assigned areas. Our solutions help with connectivity, communication, reporting, limitation of liability, and budget reduction. In addition, we can install and finance each of these solutions.

## Benefits

- Enhanced response times
- Enhanced officer and public safety
- Enhanced efficiency and lower costs
- More police presence on the streets
- Next Generation 911 CAD
- Enhanced Tracking and awareness of first responders
- Asset and Inventory Tracking
- Lower costs of Mission Critical Push-to-Talk
- Digital twin mapping of incident locations
