Cloud Security Simplified
With an exploding set of cloud infrastructure services and an increasing number of stakeholders involved in infrastructure and security decisions, the cloud has formed the perfect storm for security. In order to gain the benefits of the cloud and meet business objectives, cloud security needs to be made less complex.

Business requirements and DevOps processes demand faster application delivery, however, if you increase the speed of delivery, everything else must follow suit. For example, compliance, which changes based on industry, geography, and infrastructure, as well as protecting against evolving and increasingly sophisticated threat vectors.

Introduction to Trend Cloud One™
Trend Cloud One, a security services platform for cloud builders, delivers the broadest and deepest cloud security offering in one solution, enabling you to secure your cloud infrastructure with clarity and simplicity.

By considering your cloud projects and objectives holistically, Trend Cloud One is able to provide powerful security, while you leverage all of the benefits and efficiencies the cloud offers your business. Comprised of multiple services designed to meet specific cloud security needs, Trend Cloud One gives you the flexibility to solve your challenges today, and the innovation to evolve with your cloud services in the future.

You no longer have to find point products to meet the unique requirements of your infrastructure or work with the processes you’ve already implemented. With a comprehensive set of services, designed specifically for the cloud, Trend Cloud One secures the different parts of your environment within one simple platform.

With support for all major cloud platforms, and solutions that integrate directly into your DevOps processes and toolchain, Trend Cloud One is designed to provide the flexibility you need without slowing down your business or application delivery.
Advantages

One Powerful Solution
Customers’ environments and infrastructures aren’t standardized, and they tend to have a mix of legacy servers, virtualized data centers, and newer services, such as containers and serverless applications. Many customers also use multi and hybrid cloud strategies to meet their business objectives. We have the unique capability to offer leading security solutions for all of these customer scenarios across your entire environment, in one powerful solution.

Trend Cloud One Benefits

Automated
Security as code lets your DevOps teams bake security into their build pipeline to release continuously and frequently. With built-in automation, including automated discovery and deployment, quick-start templates, and our Automation Center, secure your environment and meet compliance requirements quickly.

Flexible
Builder’s choice. Security for your hybrid cloud, multi-cloud, and multi-service environments, as well as protection for any vintage of application delivery—with broad platform support.

All-in-One Solution
One platform that has the breadth, depth, and innovation required to meet and manage your cloud security needs today, and in the future.

Extended Detection and Response (XDR)
Trend Cloud One™ – Workload Security includes detection and response designed for server, cloud workloads, and container platforms by leveraging the XDR capabilities of Trend Vision One™.

Whatever Your Cloud Priorities Are, We Can Simplify Your Cloud Security
We recognize that there are different drivers behind your constantly evolving cloud security priorities. We also understand all of the continuous work it takes to secure your complex and fast-paced multi-cloud environment—so let’s simplify it.

Cloud migration: The transition to the cloud isn’t as simple as clicking a button and having a hybrid and multi-cloud strategy is the norm. That’s why we built the Trend Cloud One platform with the ability to secure physical, virtual, and multi-cloud environments.

Cloud-native application delivery: Working hard to deliver fast and iterate often, you are leveraging code in new ways and from different sources, such as infrastructure as code, open source, and public code repositories, which can introduce additional risk. Making matters more complicated, you have adopted new cloud services and processes to help you meet your objectives. You need security that supports this dynamic, complex approach without slowing you down. Trend Cloud One does just that, by providing solutions for DevOps, cloud storage, cloud workloads, containers, and serverless.

Cloud operational excellence: Organizations are adopting a cloud center of excellence model, with the goal of creating repeatable, consistent, secure, and compliant infrastructures that can be leveraged throughout the organization. Trend Cloud One is optimized to be cloud efficient and will help you meet governance, compliance, and assurance requirements quickly.

Trend Cloud One Provides Solutions For:

Cloud Migration
Automates the discovery and protection of public, private, and virtual cloud environments, while also protecting the network layer. This provides flexibility and simplicity in securing the cloud throughout the migration and expansion process. Gain increased visibility and consistent security throughout your cloud environments, with the most security controls and integrations within your existing toolsets.

DevOps
Trend Cloud One provides automated protection for your applications, which can be built into your CI/CD pipeline. Identify and resolve security issues sooner, as well as improve delivery time for DevOps teams. Simply set it and forget it and focus on what you do best—building great applications.

Containers
Delivers cloud-native security optimized to protect and scale across environments, baking security into your CI/CD pipeline. Build secure, ship fast, and run anywhere with automated security for your containers from the software-build pipeline to runtime, with container image scanning, as well as protection for your Kubernetes, and Docker platform.
Advantages

Serverless
Provides protection for your serverless applications against exploits, which can harm your systems, data, and business. Built for speedy deployment, with minimal impact on development streams and performance, simply add to your app with two lines of code.

Data Center
Enables the operational efficiency required to support your modern data center. Integrating with the fabric of your physical and virtualized environments, Trend Cloud One delivers fewer agents and automatic discovery and deployment of security. What’s more, by consolidating security tools with a comprehensive set of capabilities, you can better detect, protect, and respond to vulnerabilities, malware, and unauthorized system changes.

Trend Cloud One includes the following services:

- **Trend Cloud One™ – Workload Security:**
  Runtime protection for workloads (virtual, physical, cloud, and containers)

- **Trend Cloud One™ – Container Image Security:**
  Image scanning in your build pipeline

- **Trend Cloud One™ – File Storage Security:**
  Security for cloud file and object storage services

- **Trend Cloud One™ – Application Security:**
  Security for serverless functions, APIs, and applications

- **Trend Cloud One™ – Network Security:**
  Cloud network layer IPS security

- **Trend Cloud One™ – Conformity:**
  Cloud security and compliance posture management

- **Trend Cloud One™ – Open Source Security by Snyk:**
  Visibility and monitoring of open source vulnerabilities and license risks

- **Trend Micro™ Cloud Sentry:**
  Visibility of the threats in your AWS environment with quick, actionable insights in the context of your application
