

Veritas Alta™ Archiving

Benefit from a cloud-based data archive and retention to reduce compliance risk.

Highly regulated organizations need to perform seamless data archiving and data retention to support easy migration and automated identification of key content. Compliance officers and corporate legal IT teams must meet stringent supervision and discovery requirements while reducing compliance risk and controlling costs across all channels.

Veritas Alta Archiving, formerly known as Enterprise Vault, is a fully integrated cloud archiving platform. Use it to reduce costs and increase productivity by capturing, ingesting, supervising, and discovering data for your organization's compliance needs.

Simplify Retention Management

Veritas Alta Archiving interfaces seamlessly with Microsoft 365 and Google Workspace Enterprise, and on-premises mail systems such as Microsoft Exchange Server or HCL Domino to ensure information is properly retained. Use rich pattern-based classification policies to assign customized retention periods. You can apply a default retention policy to all archived information, specific individuals, or individual items via rich pattern-based classification policies to assign customized retention periods that align with your business requirements. Automated daily storage expiry ensures applicable content is removed per policy consistently and defensibly. Your retention policies also cover archived content from former employees.

Streamline Compliance and Defensible eDiscovery

Veritas Alta Archiving provides a purpose-built collection tool to capture email, attachments, and all message metadata. Archived content is time-stamped and serialized with a unique signature to ensure authenticity. The native journaling process ensures full content and recipient capture, so you always know who received what and when, regardless of user behavior. Proactively archive and store content in adherence to financial regulations. You can proactively archive and store content on 17a-4 immutable storage, if required, or reactively collect it from the source and produce it as needed.

Veritas Alta eDiscovery enables you to apply Legal Hold broadly across keyword searches and users—or to target specific legal custodians. This means you don't have to put mass restrictions on large groups or domains of users or establish challenging retention-management requirements to address regulatory compliance. Suppose an end-user deletes or modifies a message in their inbox or personal folders. In that case, the original copy remains in the journaled archive with Veritas Alta Archiving, regardless of whether or not a legal hold exists.

Veritas Alta Archiving Helps You:

- Preserve email and 120+ other content types by policy as journaled records in a high-availability repository, protected against unauthorized or accidental deletion.
- Classify content and identify the most important items to reduce risk and increase supervision and eDiscovery review and monitoring efficiency.
- Ensure that retention and storage practices comply with applicable laws and surveillance. Make sure eDiscovery practices are defensible.
- Provide rapid search, legal hold, case management, and eDiscovery workflows to reduce costs and improve the productivity of IT and litigation support staff.
- Transition from CAPEX to OPEX accounting with available subscription licensing to stabilize and control archiving costs, regardless of data growth.

Veritas Alta Archiving search and eDiscovery capabilities provide workflows to quickly scan massive amounts of data, iteratively filter out non-relevant results, then collect and organize results by cases or legal matters. Veritas Alta eDiscovery can upload data directly via Targeted Collections, allowing you to manually ingest data into a self-collected or produced case.

Search and collate millions of records in seconds. When the collection is complete, you can make the results available online to outside legal partners. During review, role-based access controls help ensure proper data handling to automatically maintain a secure evidentiary chain of custody. When it is time to produce content for external consumption, you can quickly and efficiently export it—a task you can't assume with a cloud platform.

Compliance-Ready, Best Practice Platform

Veritas Alta Archiving enhances Microsoft 365, Google Workspace, and overall information governance by providing unique best practice compliance and eDiscovery benefits, including:

- Standardizes retention-management compliance through automation and by providing proof of policy-driven retention processes
- Satisfies strict legal requirements by immutably journaling all records and ensuring a secure chain of custody for evidentiary data.
- Improves Investigation Workflow by granting role-based access to enable segregated work, such as allowing some staff to search and collect and others to only review.
- Streamlines email migration, simplifying the move to cloud-based email from on-premises, email systems by first archiving legacy data stored on tape, PSTs/NSFs, or within existing on-premises servers.
- Discovers content in the cloud or on-premises with cloud-based Veritas Alta eDiscovery.
- Reduces risk of unauthorized access to the console and data using comprehensive security controls such as password complexity, time-based one-time passwords, timeouts for inactivity, trusted networks, roles and permissions, and encryption.

Key Benefits of Veritas Alta Archiving

- Built-in Intelligent Review Machine Learning trains itself to score relevance on all content with full transparency.
- Built-in noise reduction automatically reduces false positives caused by allowlisted users and disclaimers.
- Hit Highlight Navigation directs reviewers to relevant content, so they don't have to read across an entire message.
- Purpose-built review of collaboration content allows reviewers to review Microsoft Teams Chat and Channels as it looks in Teams with full fidelity including edits, reactions, images, and attachments.
- Granular access controls ensure you can enable or disable each function for specific roles and users.
- Audit search capabilities guarantee that each action is logged, indexed, findable, and exportable.

Empowering Security Features

Veritas Alta Archiving includes robust security features that provide extensive control over your data and facilitate secure access. These include:

- **Manage Your Own Key:** Guarantee the autonomy to supply and control the encryption key for your data. Maintain complete control over data and gain an additional protective measure against government data requests.
- **One-Time Password:** Provide an additional layer of security to fortify authentication. Require user validation with a unique one-time password delivered to their registered email. This capability especially benefits users who haven't implemented SSO with MFA and Conditional Access.
- **Azure AD MFA Support:** Facilitate the use of Azure AD MFA with Azure SSO, strengthening the ability to protect data through multiple authentication methods.
- **SOC 2 Type II Audit:** Annual review performed by a third-party security firm.

Migrate from On-Premises Archives to the Cloud

Veritas Alta Archiving helps you fulfill cloud initiatives with a proven cloud-based solution to meet supervision and discovery requirements. Organizations using on-premises archiving on any platform, including Enterprise Vault, can benefit from industry-leading services and tools for organizations of all sizes.

Organizations moving from Enterprise Vault to Veritas Alta Archiving can use the new Direct Migrator. Direct Migrator quickly and safely migrates data, including Discovery and Supervision work product. It's a cost-effective way to migrate with full fidelity at a high rate of speed, up to 5x faster than a typical migration. Direct Migrator also migrates Discovery Accelerator/Compliance Accelerator work product. Meanwhile, the targeted collection of Enterprise Vault content from Veritas Alta Archiving allows full access to your content during the migration.

Supporting Products from the Veritas Alta™ Portfolio

Veritas Alta Capture

Every day, corporations distribute a massive amount of content via many different communication platforms. Handling data capture, accumulation, and archiving processes on such a large scale can be laborious and expensive. Veritas Alta™ Capture provides organizations with robust cloud-based solutions that strive to streamline data collection and reduce compliance risk, regardless of the location of content sharing.

The integrated Veritas Alta™ Capture content collection solution captures 120+ content sources above and beyond email, such as voice, video, collaboration content, chat, social media, and more.

- Capture everything
- Minimize compliance risk
- Reduce complexity
- Design reviewer workflows
- Handle reporting and auditing

Veritas Alta eDiscovery

A cloud-based, end-to-end eDiscovery solution, Veritas Alta eDiscovery enables you to collect, review, and produce electronically stored information for legal and investigation needs. Pair this with Veritas Alta Archiving for discovery and compliance. Veritas Alta eDiscovery provides a complete discovery solution in one step: Defensible collection of your organization's relevant content sources, purpose-built review of all types of data, and efficient production of relevant documents. Use it to:

- Accelerate eDiscovery and other investigative inquiries with scalable grid architecture, advanced indexing technology, and powerful search capabilities that deliver results in seconds.
- Streamline matter management by giving your legal team and outside counsel direct access to your repository with a built-in collaborative workflow that allows them to share the review workload across multiple reviewers, quickly cull search results, and apply work product to relevant items.
- Minimize disruption to your IT team by allowing designated internal and external reviewers and administrators to perform self-service online exports of search results.
- Optimize review with native collaboration and file content review interface.

Veritas Alta Surveillance

Perform supervisory review of communications and collaboration content to address regulatory requirements for financial, insurance, and other industries. Veritas Alta™ Surveillance provides an enterprise-grade, purpose-built interface for compliance teams to perform regulatory surveillance. Veritas Alta Archiving provides the compliant storage, retention, and capture of all regulated communication and collaboration content that requires supervision. Veritas Alta Surveillance provides a complete compliance solution to:

- Create and manage departments
- Assign roles and access
- Automate search and sampling

Veritas Alta Surveillance is designed to optimize both compliance management and reviewer experiences to reduce organizational risk, eliminate reviewer fatigue, and help organizations increase their findings while reducing false positives. It incorporates machine learning, natural language processing, automated classification, continuous active learning, and noise-reduction features. Veritas Alta Surveillance modernizes supervision for many organizations significantly reducing noise while increasing findings by 300% and more.

Veritas Alta Archiving

The core Veritas Alta Archiving service consists of the journal data-archive system and its web-based management applications, plus optional Personal Archive for end-user search and retrieval and Discovery Archive for federated search and eDiscovery.

Other services available with Veritas Alta Archiving include:

Optional Services

- **Folder Sync Service:** FolderSync synchronizes users' existing Outlook folder structures in Enterprise Vault Personal.cloud archive, allowing users to seamlessly view their archive folder structure just as they would their inboxes.
- **Classification Integration:** Utilizing the same classification engine as Enterprise Vault and other Veritas products, Veritas Alta Archiving can classify archived information and apply tags where there are policy matches to help streamline Supervision and eDiscovery processes.
- **Veritas Enterprise Vault Mailbox Continuity:** An add-on feature for Microsoft 365 and Exchange Online helps maximize email availability and guard against disruption and data loss from an email outage. The service automatically activates when an outage occurs, allowing users to continue sending and receiving messages via their archive while the mail system is unavailable.
- **Data Ingestion Service:** Veritas can import (ingest) Enterprise Vault on-premises data and legacy email data from your email environment so that you can consolidate and retain all your data in long-term storage in a single location and migrate your on-premises communications and archiving solutions to the cloud.

Complementary Services

- **Enterprise Vault Collector Agent:** Perform targeted collections from existing on-premises Enterprise Vault environments. Shift archiving operations to Veritas Alta Archiving and perform consolidated discovery against both Enterprise Vault and Veritas Alta Archiving from Veritas Alta eDiscovery.
- **Usage Notifications:** Proactively manage your license subscription by leveraging notifications that flag when you've exceeded a specific percentage of committed usage.
- **Veritas Alta Archiving Cloudlink and Microsoft 365 Sync Tools:** Synchronization tools for Azure Active Directory, Google, Microsoft Active Directory, or Domino Directory. Each time a new user is created, it automatically provisions a new archive account for them in Veritas Alta Archiving.
